

ML² ICO Short Form Whitepaper

The ML² philosophy is to create an enclosed trading platform / ecosystem that delivers, through a series of tools and interfaces, all the required intelligence to enable active traders to create and meet their own trading objectives => this has been achieved through the ML² platform

ML² platform: next generation+ derivative trading platform:

- **The most advanced predictive analytical platform** available to retail and institutional derivative traders
- Offering a series of trading algorithms that detect price anomalies through and ahead in time [advanced warning of directional changes in the price of any financial instrument]
- That enable the active trader to map the forward price path of any financial instrument within a series of time windows [1 minute, 15 minutes, 30 minutes, 60 minutes to 24 hours]
- 6 predictive algorithms suited to any market condition and financial instrument
- 40 + tools
- 10,000 + financial instruments including crypto-currencies

ManagedLeverage.com

The ML platform offers a series of unique non replicable algorithms that determine the future price: these algorithms are not available to either retail or institutional traders and so will only be made available on the ML² platform now and in the future

Access to the ML platform will be available through ownership [purchase] of the ML membership token through the forthcoming ICO – ***there will be no further costs or fees to the token holder***

ML ICO: membership token

ML² token will assign perpetual access rights to the ML² platform = the most advanced next generation+ ***predictive analytical derivative trading platform***

For this reason, the ML² token will be restricted and governed within the Ethereum ‘smart contract’:

- access to the ML² platform requires the ownership of at least 1 ML token, but access rights are into perpetuity – current tools and new tools
- there is a hard cap on the number of tokens released = no more will ever be created and none will be burnt [= enclosed ecosystem]

For more detailed information on the ML² platform attributes, tools and explanation of the algorithms, ICO and ML² trading platform

ML² ICO

[ML² Token Asset Sale]

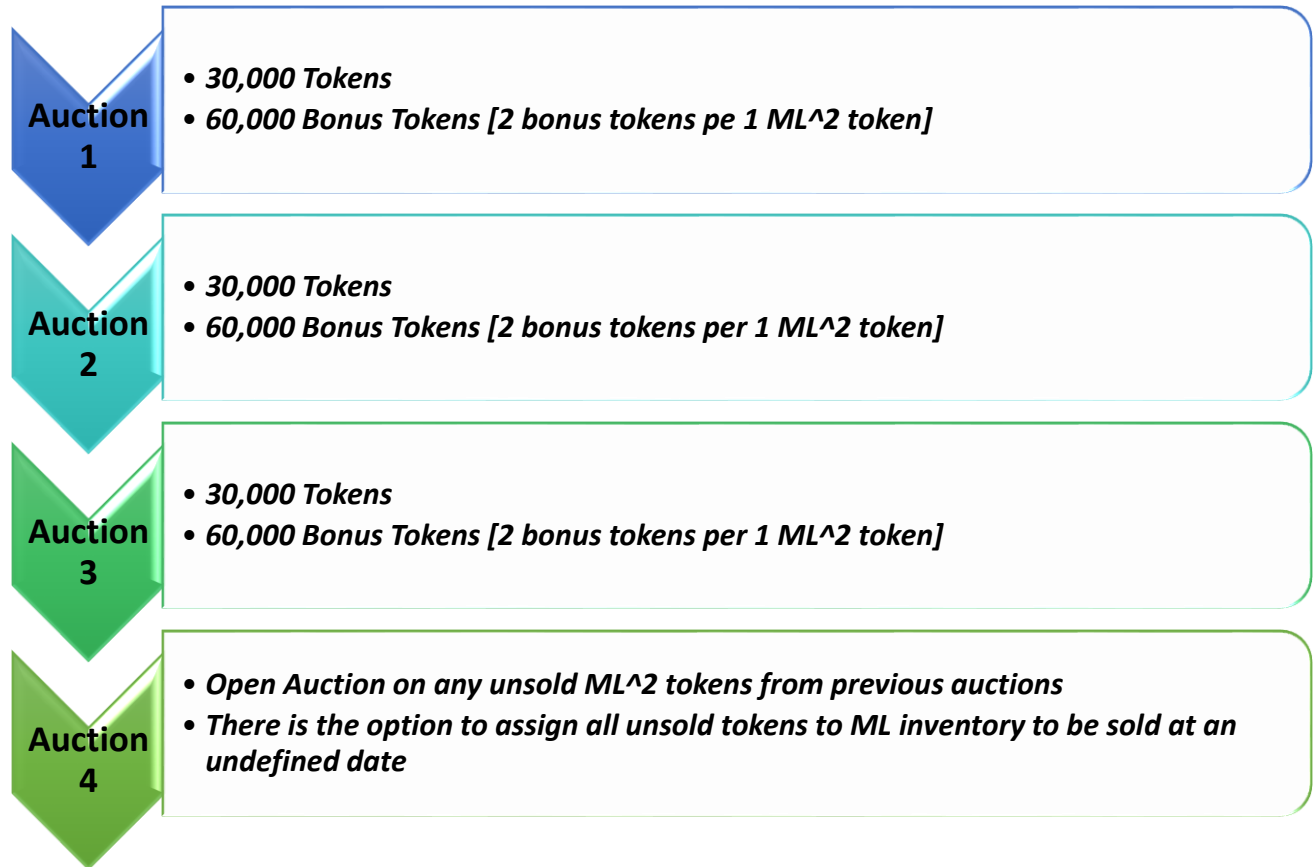

Token Name	<ul style="list-style-type: none"> • <i>ML² Membership Token</i>
Website	<ul style="list-style-type: none"> • <i>ManagedLeverage.com</i> • <i>ManagedLeverage2ICO.com</i>
Type of Offer	<ul style="list-style-type: none"> • <i>Initial Coin Offering - Token Asset Sale</i>
Total Tokens	<ul style="list-style-type: none"> • <i>100,000 ICO release and auctions</i>
ERC20 Token	<ul style="list-style-type: none"> • <i>Yes</i>
Accepted Currencies	<ul style="list-style-type: none"> • <i>ETH</i>
Token Release Price	<ul style="list-style-type: none"> • <i>0.250 ETH = 1 ML² Token [First Release]</i> • <i>0.500 ETH = 1 ML² Token [Second Release]</i> • <i>ETH will be adjusted to support the cost as the suggested USD</i>
Token Auction Price	<ul style="list-style-type: none"> • <i>Set by the highest ETHUSD bid price</i>
Offering Structure	<ul style="list-style-type: none"> • <i>344,000 ML² Tokens</i>

Note: The Auctions are optimal at a time of ML convenience to sell the pre ICO releases

Pre ICO

ICO

Maximum capped tokens 344,000

Minimum capped tokens 344,000 – no tokens will be burnt, no new tokens

The ML² algorithms can detect what the current directional price trend is [mean reverting, momentum, random Core State], the time left in that state [duration], project the forward price path of each state, and when that state is about to change [phase transition] the new Core State => ahead in time

ML² solution to trader's pain point:

"If the trader is to know where the forward price will be at any future point in time, what else do they need to know = they know all that there is, as is required in order to achieve their trading objectives"

ML² platform:

next generation+ derivative trading platform:

The most advanced predictive analytical platform available to retail and institutional derivative traders

- offering a series of trading algorithms that detect price anomalies through and ahead in time [advanced warning of directional changes in the price of any financial instrument]
- that enable the active trader to know and map the forward price path of any financial instrument within a series of time windows [1 minute, 15 minutes, 30 minutes, 60 minutes to 24 hours]

ML series of tools includes:

- 10,000 + instruments including cryptoassets [alt tokens]
- time windows [ranging from 1 minute => 15 minute, 30 minute, 60 minute through to the 24 hour] which present the forward price path and volatility states
- determines the current 'Core State' for each instrument :
{'Core States' = trending-momentum +/-, mean reverting +/-, random}
- ability to detect price anomalies [advanced warning on directional price changes] that lead to changes in the price path = ['phase transition'] ahead in time

The change in the current Core State, the new Core State and the duration period for the Core State

example: the current Core State may be 'persistent long trending' – when a phase transition occurs, this Core State will change to a new Core State, such as 'persistent short trending' or 'mean reverting long' – both these states are detected in advance

- determines the next 'Core State' in the current time window: 'phase transition' ahead in time
- portfolio construction, monitoring and hedging tools
- statistical arbitrage, PAIRs trading
- automated trading program
- embedded charting and trade execution in the ML² platform

See the whole suite of tools and trading programs on: ManagedLeverage.com

ML² tokens will be traded on the ML DEX exchange, and in due course the ML² platform will be managed by a smart contract: all trades will be managed on the Ethereum block-chain
